Soares Lab Clone distribution: Researchers may obtain BMAP cDNA clones from RESEARCH GENETICS. It should be noted that Bento Soares is generating a small number of additional specialized non-redundant arrays of BMAP cDNAS whose availability will be considered under appropriate and limited collaborative arrangements The tissue for this library was contributed by Dr. Xin-Yuan Fu, vale University School of Medicine Seq primer: M13 Forward POLYA-No.

The ataxia protein and polynucleotides are useful for diagnosing and treating disorders related to ataxia. Ataxia gene sequences are useful in gene therapy, and as diagnostic tools or reagents for identifying and characterizing genetic defect involved in the disorders and diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes a method for examining ischaemic conditions, comprising measuring the expression levels of particular genes (I) in a test sample or determining the expression profile of a gene group in the sample comprising genes selected from (I). The method is useful for examining the ischaemic condition (e.g. compressive ischaemia, occlusive ischaemia or vasospastic ischaemia) by measuring expression levels of particular genes (AB199202 to AB19912, encoding the protein sequences in ABB57020) to ABB57374) or by determining the expression profile of a gene group comprising these genes. The expression levels or expression profiles produced by these genes are used as an indicator when screening for ischaemic condition in the expression profile of ischaemic condition related sequence, which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches

The invention relates to Rhipicephalus sanguineus (brown dog tick)

2 L-glutamate-gated chloride channel proteins (GluCl1 and GluCl2)

2 and nucleic acid molecules encoding such proteins. GluCl channel

3 proteins are useful for identifying modulators. The compounds

4 identified as modulators are useful for insecticidal, mitacidal

5 and/or nematocidal treatment for use in animal and human health

6 and/or crop protection. The compounds are also useful in screening

7 for and selecting compounds active against parasitic invertebrate

8 species relevant to animal and human health, including worms,

7 fleas, ticks, mites and lice. Heterologous cell lines expressing

7 functional GluCl1 and GluCl2 channel functional forms are useful

8 for establishing functional or binding assays to identify novel

8 GluCl channel modulators. The present sequence is R. sanguineus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                               Lightamate-gated chloride channel proteins (GluCl and GluCl2) and nucleic acid molecules encoding such proteins. GluCl channel proteins are useful for identifying modulators. The compounds identified as modulators are useful for insecticidal, mitacidal and/or nemarcoidal treatment for use in animal and human health and/or crop protection. The compounds are also useful in screening for and selecting compounds active against parasitic invertebrate species relevant to animal and human health, including worms, fleas, ticks, mites and lice. Heterologous cell lines expressing functional GluCl1 and GluCl2 channel functional forms are useful for establishing functional or binding assays to identify novel GluCl channel modulators. The present sequence is R. sanguineus
                                                                        Sequence
                                                                                                        GluCll protein, T12.
                                                                                                                                                                                                                                                                                                             The invention relates to Rhipicephalus sanguineus (brown dog tick) L-glutamate-gated chloride channel proteins (GluCl1 and GluCl2)
                                                                                                                                                                                                                                                                                                                                                                                                                   Novel L-glutamate-gated chloride channel proteins from Rhipicephalus sanguineus for identifying compounds which modulate the channel proteins, which are useful as insecticides, anthelmintics and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Brown dog tick;

                                                                                              The invention relates to Rhipicephalus sanguineus (brown dog tick) L-glutamate-gated chloride channel proteins (GluCl1 and GluCl2) and nucleic acid molecules encoding such proteins. GluCl channel proteins are useful for identifying modulators. The compounds identified as modulators are useful for insecticidal, mitacidal and/or nematocidal treatment for use in animal and human health and/or crop protection. The compounds are also useful in screening for and selecting compounds active against parasitic invertebrate species relevant to animal and human health, including worms, flore as the parasitic compounds.
                                                                                                                                                                                                                                                                                                      WPI;

                                                                                                                                                                                                                                                                                                                                                                                                               glutamate-gated chioride channel, alternative form. Note: This sequence SEQ.ID.NO.14 is stated to be similar to the sequence shown in column 14 of the specification. However this sequence contains six additional residues at the N-terminal end
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     glutamate-gated chloride channel. Glutamate-gated chloride channels are a family of ligand-gated chloride channels unique to invertebrates. The DNA of the invention is used for recombinant production of lepidopteran glutamate-gated chloride channel and this is used, optionally in the form of membrane preparations or recombinant cells, in specific binding or functional assays for identifying potential insecticides. The present sequence is Heliothis virescens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 1; Column 27-30;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to gamma-aminobutyric acid (GABA)-gated chloride channels and their corresponding nucleic acid molecules. GABA-gated chloride channel proteins and DNA's are useful for preventing and treating tick infestation, particularly in humans, dogs, cattle, horses, deer, or other wild or domesticated animals. The nucleic acids are useful as hybridisation probes or Polymerase Chain Reaction primers for identifying the presence of Dermacentor variabilis GABA-gated chloride channel nucleic acid or DNA's encoding for a GABA receptor. The nucleic acids are also useful for the recombinant expression of D. variabilis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gamma-aminobutyric acid; GABA; tick infestation; mite; antiparasitic; GABA-gated chloride channel; recombinant expression; domestic animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              GABA-gated chloride channel proteins. GABA-gated chloride channel proteins exert toxic effects on other ticks or related parasites such as mites. The present sequence is Dermacentor variabilis clone 8 GABA-gated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          chloride channel protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to gamma-aminobutyric acid (GABA)-gated chloride channels and their corresponding nucleic acid molecules. GABA-gated chloride channel proteins and DNA's are useful for preventing and treating tick infestation, particularly in humans, dogs, cattle, horses deer, or other wild or domesticated animals. The nucleic acids are useful shybridisation probes or Polymerase Chain Reaction primers for identifying the presence of Dermacentor variabilis GABA-gated chloride channel nucleic acid or DNA's encoding for a GABA receptor. The nucleic acids are also useful for the recombinant expression of D. variabilis
                                                                                                                                                                                                                                                                                                                                                                                                                                       GABA-gated chloride channel proteins. GABA-gated chloride channel proteins exert toxic effects on other ticks or related parasites such as mites. The present sequence is Dermacentor variabilis clone 5 GABA-gated chloride channel protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New polypeptide useful for preventing or treating tick infestation, humans, dogs, cattle, horses, deer, or other wild or domesticated animals, comprises the Dermacentor variabilis gamma-aminobutyric ac
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gamma-aminobutyric acid; GABA; tick infestation;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      õ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Вþ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
AAX24372). The invention also provides expression vectors, host cells and methods for recombinant production of CfGluCl-1. Also claimed is a method of identifying a compound that modulates GluCl protein activity which comprises: (a) injecting into a host cell solution a population of nucleic acid molecules (NAMS), at least a portion of which encodes a GluCl protein, such that expression of the portion of NAMS results in an active GluCl; (b) adding a test compound into the solution; and (c) measuring host cell membrane current at a holding potential more positive than the reversal potential for chloride. The products and methods can be used to identify GluCl channel modulators which interfere with
                                                                                                                                                                                                                                                                                                                                         This is the full-length amino acid sequence of CfGluCl-1, a new glutamate gated chloride channel of cat flea (Ctenocephalides felis). The sequence was deduced from an isolated CfGluCl-1 cDNA (see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated glutamate gated chloride channels
Ctenocephalides felis, used to develop products
parasites, insects, aphids or nematodes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WPI; 1999-167412/14.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to gamma-aminobutyric acid (GABA)-gated chloride channels and their corresponding nucleic acid molecules. GABA-gated chloride channel proteins and DNA's are useful for preventing and treating tick infestation, particularly in humans, dogs, cattle, horses, deer, or other wild or domesticated animals. The nucleic acids are useful as hybridisation probes or Polymerase Chain Reaction primers for identifying the presence of Dermacentor variabilis GABA-gated chloride channel nucleic acid or DNA's encoding for a GABA receptor. The nucleic acids are also useful for the recombinant expression of D. variabilis GABA-gated chloride channel proteins. GABA-gated chloride channel proteins GABA-gated chloride channel proteins. The present sequence is Dermacentor variabilis clone 9 GABA-gated chloride parasites such as mites. The present sequence is Dermacentor variabilis clone 9 GABA-gated chloride parasites such as the channel protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New polypeptide useful for preventing or treating tick infestation, in humans, dogs, cattle, horses, deer, or other wild or domesticated animals, comprises the Dermacentor variabilis gamma-aminobutyric acid (GABA)-gated chloride channel -
                                AAW05246 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryctes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                   Sequence
                                                                                                                                                                        The sequence data for this patent did not form specification, but was obtained in electronic at ftp.wipo.int/pub/published_pct_sequences.

Example 2; Column 53-56; 51pp; English.

This invention describes novel purified and isolated nucleic acids (I) encoding mutant invertebrate gamma aminobutyric acid (GABA) receptors Expression of the GABA receptor is used for drug and pesticide screening and for identifying GABA antagonists or agonists. The methods allow large numbers of compounds potentially useful as drugs or pesticides to be screened and to find compounds which overcome existing or potential resistance mechanisms e.g. pesticides which are capable of blocking GABA-gated chloride channels resistant to cyclodienes. (I) may be used to detect mutants by the polymerase chain reaction (PCR) and/or hybridization and to detect and genotype insects which may be resistant to insecticides which affect the GABA receptor. Introducing (I) into a

The insect GABA receptor shows critical pharmacological differences from the vertebrate receptor which may result in the development of insect-specific insecticides with greater safety for vertebrate exposure. This sequence represents a variant Drosophila simulans (fruitfly) GABA receptor RIdMD-RR described in the method of the invention.
